# WEEK 2 · REMOTE + GATE

## MODULE 00 FINISH → TERMINAL START

Connect to a real Linux environment, pass the Module 00 phase-gate, then take your first terminal steps.

**MON + WED · 6:00–8:00 PM · ZOOM · LABS 00:05–07 (+ 01:00–01)**

**This week closes Module 00.** Monday we connect Windows to **WSL**, everyone to the college server over **SSH**, and walk the Module 00 phase-gate live. Wednesday is a clinic for screenshots, connection issues, and (if you're ready) the first Ubuntu terminal labs. Labs — not attendance — gate progress.

## WEEK GOALS

**1**
### WSL GREEN
Windows: bottom-left shows **WSL: Ubuntu**. Mac/Linux: native shell + `uname -a`.

**2**
### SSH CONNECTED
Green **SSH: hostname**. `hostname` + `whoami` match the remote — not your laptop.

**3**
### GATE SUBMITTED
One screenshot: green badge + `whoami` + `pwd` in the remote terminal.

**4**
### TERMINAL READY
Stretch / Wed: Module 01 setup check + `pwd` / `ls` / `cd`.

### BEFORE MONDAY
- Finish labs **00:00–04** if anything is still open
- **Windows:** run `wsl --install` at home and **reboot** before class
- Install extensions if missing: **WSL** + **Remote - SSH** (Microsoft)
- Bring laptop + charger + admin / Linux password
- Watch Module 00 videos for 05–07 if posted in D2L

### BRING TO CLASS
- Any stuck screenshot or error from Week 1
- Whether you're on Windows, Mac, or Ubuntu
- Notebook for the SSH host / user the instructor posts
- Patience — first SSH connection asks you to type **yes**
- Laptop charger (sessions run ~2 hours)

## MONDAY · INSTRUCTION

| CLOCK | BLOCK | WHAT WE DO LIVE | LAB IDS |
|---|---|---|---|
| **6:00** | **Open + recap** | Sign-in · OS check · who already has green WSL? | — |
| **6:10** | **WSL connect** | Windows: extension → connect → green badge · `uname -a`. Mac/Linux buddy-help | 00:05 |
| **6:35** | **SSH remote** | Remote - SSH · add host · type **yes** · open remote folder · `hostname` + `whoami` | 00:06 |
| **7:10** | **Phase-gate** | ~15 min, no help: palette → extension → remote → screenshot for D2L | 00:07 |
| **7:50** | **Close** | What "done" looks like · submit gate · Wed clinic preview | — |

## WEDNESDAY · LAB CLINIC

| CLOCK | BLOCK | WHAT WE DO LIVE | LAB IDS |
|---|---|---|---|
| **6:00** | **Gate clinic** | Screenshot triage · green-badge confusion · key / permission errors | 00:07 |
| **6:40** | **SSH / WSL fix** | Reconnect drills · smart-quote paste fails · wrong folder path | 00:05–06 |
| **7:15** | **Terminal start** | If gate is in: Module 01 setup check + `pwd` / `ls` / `cd` | 01:00–01 |
| **7:50** | **Close** | Confirm gate submitted · homework through Sunday · Week 3 preview | — |

**Core path this week:** labs **00:05 → 00:06 → 00:07**. Warm rows = stretch. Do not start Module 01 until your Module 00 gate screenshot is submitted in D2L.

| 2 | 3 | 00 → 01 | Gate |
|---|---|---|---|

## LAB LAYOUT — WHAT "DONE" LOOKS LIKE

Each row is one D2L learning object. Do the video (if available), then the lab, then submit the screenshot. Green rows = Module 00 phase-gate. Warm rows = Wednesday stretch after the gate is in.

### CORE MODULE 00 · REMOTES + PHASE-GATE

Mon focus · Wed cleanup

| # | LAB | WHAT YOU DO | PASS / SCREENSHOT |
|---|---|---|---|
| 00:05 | WSL Connection | MON **Windows:** WSL extension → Connect to WSL → open `/home/…` → `uname -a`. **Mac/Linux:** native terminal `uname -a` (buddy-help Windows). | Windows: green **WSL: Ubuntu** + `uname -a` (says Linux). Mac/Linux: `uname -a` output |
| 00:06 | SSH Remote | MON Install **Remote - SSH** (Microsoft) → Connect to Host → paste instructor host → type **yes** → open remote folder → run `hostname` and `whoami`. | Green **SSH: hostname** + both command outputs (remote values, not laptop) |
| 00:07 | Final Checkpoint | MON **Phase-gate — no help.** Command palette toggles terminal · install "Markdown All in One" · connect WSL *or* SSH · open remote folder · run `whoami` + `pwd`. | **One** screenshot: green WSL/SSH badge + both outputs visible. Submit in D2L |

### STRETCH MODULE 01 · TERMINAL START

Wed · only after gate submitted

| # | LAB | WHAT YOU DO | PASS / SCREENSHOT |
|---|---|---|---|
| 01:00 | Setup Check | WED Confirm Ubuntu is ready: `lsb_release -a`, `ping -c 3 8.8.8.8`, `sudo whoami`, `pwd`. | Commands succeed without errors (password typing stays invisible) |
| 01:01 | Where Am I? | WED Drill `pwd`, `ls`, `cd`, `cd -`, and home with bare `cd`. Stop hesitating about "where am I?" | Checkpoint paths match the lesson; you can `cd` home from anywhere |

## STUCK-SPOT CHEAT SHEET

| MOMENT | WHAT FAILS | FIX LINE |
|---|---|---|
| **WSL** | Needs reboot / blank password | Reboot after `wsl --install`. Password typing is invisible — keep typing, then Enter |
| **Badge** | Opened `C:\Users\…` | Not connected. Reconnect → green **WSL: Ubuntu** → open `/home/…` |
| **SSH first** | Fingerprint prompt stalls | Type **yes** (Enter alone does nothing — there is no default) |
| **SSH key** | UNPROTECTED PRIVATE KEY | Windows: lock key permissions to your user only · or keep the key inside WSL |
| **Paste** | Host string has curly quotes | Paste from chat / plain text only — never from Word or styled email |
| **After SSH** | "My local files vanished" | Expected — every terminal/file is on the remote until you Close Remote Connection |
| **Gate** | Stuck mid-checkpoint | Re-read the lesson — no instructor help during the 15-minute block. Ask after time's up |

**After Wednesday → Sunday:** Module 00 gate must be in D2L. If you started Module 01, finish **01:00–01**. Don't rush ahead into sudo/permissions yet — that's Week 3. Minimum comfort: green remote badge, gate screenshot submitted, you can `pwd` / `cd` without panic.
