WEEK 2 · WEDNESDAY ACTIVITY

YOU ARE HERE

ONE DOWNLOAD · THE WHOLE CREW WALKS IT

The directory signs fell off. WSL or Mac. Prove where you are.

WED · 6:00–8:00 PM · ZOOM · CREWS OF 3

Tonight is one lab, done as a group. Everyone downloads the same `setup.sh`, builds the building on their own machine, and a crew of three walks it together. Six floors, then you say what the machine will print before it prints it, then a banner. A floor counts only when **all three** have its fragment. **WSL and Mac both work. SSH is not part of tonight.** The only commands inside are `pwd`, `ls`, `ls -la`, `cd`, `cd -`, `hostname`, `whoami`, and `uname`.

1 file
DOWNLOAD
D2L live lab, or the file in Zoom chat. `bash setup.sh` as yourself. Never sudo.

×3
OWN KEYBOARD
Driver types. Navigator reads the floor aloud. Scribe tracks fragments. Rotate every floor.

Banner
ALL THREE
Screenshot `bash ~/you-are-here/banner.sh` from every machine into Zoom chat.

BEFORE 6:00 — BUILD, DON'T EXPLORE

- Download `setup.sh`
- `bash setup.sh` in Ubuntu (WSL) or Mac Terminal
- Check: `ls ~/you-are-here` shows the floors
- Stop there. `cat README.txt` waits for the clock
- Wrecked it later? `bash setup.sh --reset`

HOW A CREW OF 3 CLEARS A FLOOR

- Cameras on. Think out loud. Words only — never type on someone else's machine
- Scribe posts in main chat: `CREW 2 — floor 4 (3/3)`
- Floors stay shut until all three finish `join.sh` and type each other's badges
- Finished early? Coach the other two until their banners match
- **3 hint tokens** for the night. First hint is always: read the floor again
- Winner: first crew with **three banners** in chat. Tiebreaker: fewest hints

TONIGHT

CLOCK	BLOCK	WHAT WE DO LIVE
6:00	Build	Sign-in · name crews of 3 · ✓ in chat when `ls ~/you-are-here` works · rescue anyone still in Windows Command Prompt
6:15	Launch	Say **WSL** or **Mac** · `bash ~/you-are-here/join.sh` on all three machines · seats 1, 2, 3 · read hostname, whoami, and badge across the crew · then start
6:25	The walk	About 60 minutes in breakouts · six floors · the building tells you the next command · instructor floats
7:25	Debrief	Banners up · one crew teaches the wrong door · one teaches `cd -` · one walks the five-stop route out loud
7:45	Close	Module 00 gate still due in D2L by Sunday · SSH only if you still owe 00:06 · Week 3 is sudo and permissions

Participation: the banner screenshot, from every machine. **Still the real gate:** one D2L screenshot with a green WSL or SSH badge plus `whoami` and `pwd`. Tonight's building does not replace that. No sudo in this lab.

1	3	6	Banner
FILE TO DOWNLOAD	PER CREW	FLOORS	ALL THREE MACHINES

Instructor page — do not screen-share. Page 1 is safe to show. This page is the answer key. The building already tells students the next command; don't read the fragments out loud.

ANSWER KEY

FLOOR	WHAT THEY ACTUALLY DO	WORD
Roll call	`bash ~/you-are-here/join.sh`. Same crew name on all three. Seats 1, 2, 3. Each reads hostname, whoami, and badge. The others type what they heard. A solo machine cannot invent a second seat. `--redo` if the crew name was wrong.	`lock`
1 · Wrong Door	`cd windows-side` · `cat Users/Documents/EMPTY.txt` · `bash look.sh` · `cd ..` · `bash stamp.sh`. Lesson: files didn't vanish; `/mnt` is the Windows drive; Mac home is `/Users`.	`HERE`
2 · Home Button	Bare `cd` (no path, no tilde). `bash ~/you-are-here/home-button/stamp.sh` only passes when `pwd` is `$HOME`.	`BARE`
3 · Dotfile	`ls -la` · `cat ~/.you-are-here` · `bash ~/you-are-here/dotfile/stamp.sh .bashrc` (any real dotfile except the planted note). Mac: `.zshrc` or `.zsh_history`.	`DOT`
4 · Stairs	From the stairs, same terminal: `cd /tmp` · `bash drop.sh` · `cd -` · `bash stamp.sh`. Crew enforces "don't retype the path." Mac `/private/tmp` counts.	`HOP`
5 · Route	`bash scout.sh` at home → `/etc` → `/usr` → home → `/`, in that order. Scout prints the next stop.	`ROUTE`
6 · Callback	Seat 1's card is only `/etc`, seat 2 only `/usr`, seat 3 only `/var`. They read their own path aloud. Everyone still types all three, with bare `cd` and `home.sh` between calls.	`BACK`
Front desk	`bash ~/you-are-here/predict.sh` — say `hostname`, `whoami`, `pwd`, `uname -a`, then Enter. Linux → say WSL. Darwin → say Mac.	`SAID`
Banner	`bash ~/you-are-here/banner.sh` lists every fragment plus machine, user, and pwd. All three screenshots in chat.	`banner`

WHEN THEY GET STUCK

THEY SAY	WHAT TO TELL THEM
Badge	Crew ids differ, or they typed this machine. Have each seat re-read hostname, whoami, and badge. `bash ~/you-are-here/join.sh --redo` if the name was wrong.
Windows	Setup refuses anything that isn't Linux or Darwin. Open the Ubuntu app, not Command Prompt.
No note	`ls` hides it. `ls -la` from home. The name contains `you-are-here`.
Not home	They typed a path. Two letters: `cd`. Then run the stamp again.
Stairs	Second terminal forgot the hop. One terminal: `cd /tmp`, then `cd -`. `/private/tmp` on a Mac is the same room.
Route	Scout names the next stop and prints `pwd`. `bash scout.sh --reset` starts the five over.
Callback	They marked two floors without coming home. `bash home.sh --reset`, then one call at a time.
Mess	`bash setup.sh --reset` deletes `~/you-are-here` and the hidden note, then rebuilds.

BEFORE CLASS · THE ONE FILE

Post **class-materials/you-are-here/setup.sh** on the D2L live lab (after 00:07) and drop a copy in Zoom chat.
Dry-run: `bash setup.sh --reset`. Nothing asks for sudo. Nothing writes outside `~/you-are-here` except the one hidden note `~/.you-are-here`, and reset removes that too.
Breakouts of 3. Mix a confident navigator with someone who is still unsure where `pwd` points.
