STUDENT READ-AHEAD · WEEK 3 LIVE LAB

TERMINAL ESCAPE NIGHT

"LOCKDOWN AT CHIEFOS" · READ THIS BEFORE CLASS

No lecture tonight. Four locked rooms, a dead GUI, and a race — your keyboard is the only key.

WED AUG 5 · 6:00–8:00 PM · ZOOM · SETUP REQUIRED BEFORE CLASS

The story: a bad update has locked every door in the ChiefOS server building at 23:47 — and you're inside. Mouse dead. GUI dead. Terminal only. You'll fight through **four escape rooms**, each guarding one code word. Collect all four, write the escape plan, and get out. **Every room is solvable with commands you already used in labs 01:02–06.** Nothing new is required — tonight tests whether the week stuck. The answer to every puzzle is written down inside the game. Read the room. It always tells you.

DO THIS BEFORE 6:00 PM — REQUIRED

1. Download `setup.sh` from D2L (Week 3 → Escape Night)
2. In your WSL/Ubuntu terminal, run: `bash setup.sh` — as yourself, **never** `sudo bash setup.sh`
3. It asks for your password **once**, near the end. The prompt types invisibly — keep typing, press Enter
4. Verify: `ls ~/escape-night` shows **four room folders** + README
5. **Don't go in yet.** Exploring early is cheating yourself out of the race

BRING TO CLASS

- Laptop + charger + your **sudo/Linux password**
- Know how to open a **second terminal window** — one room needs two at once
- Your notes from Monday — tonight is **open-notes**, and page 2 of this handout is a legal cheat sheet
- Labs 01:02–05 finished if possible — the game assumes those muscles
- Setup didn't work? Arrive at **6:00 sharp** — that's the fix-it window

HOW THE RACE WORKS

TEAMS

3 TEAMS · 6 PODS

Team **SUDO**, Team **NANO**, Team **CHMOD** — each split into two pods of 4–5, each pod in its own Zoom breakout room. Your team's score is the sum of both pods.

ROLES

ROTATE EVERY ROOM

Driver shares screen and types while narrating · **Reader** reads the room's files aloud · **Scribe** tracks code words and posts clears in main chat. Everyone else: eyes on for typos.

RULE #1

NOBODY RIDES ALONE

Everyone types every room on their **own machine**. A pod clears a room only when **every member** has the code word. Finished early? Coach with words — never touch a teammate's keyboard.

SCORING

- Each room pays points by pod finish order: **6·5·4·3·2·1**
- The final escape pays **double**
- Team score = pod A + pod B — a slow start can still win the vault
- Winning team gets bragging rights + first pick of debrief topic

HINTS

- Your pod has **1 hint token** for the whole night — spend it wisely (Zoom "Ask for Help" summons the instructor)
- Unlimited free hint, always the same: **read the room's files again** — the answer is written down. It always is.
- The game itself talks back: when something doesn't work, it prints *why*. Read the message before asking

TONIGHT · SCHEDULE

CLOCK	BLOCK	WHAT HAPPENS
6:00	**Check-in**	Post a ✓ in chat when `ls ~/escape-night` shows four rooms · setup rescue for anyone stuck
6:20	**Launch**	The story · pod assignments · rules · pods split to breakout rooms
6:30	**The escape**	50:00 on the clock · leaderboard live in the main room · milestone broadcasts as pods break through
7:20	**Debrief**	Game called on points · each team teaches one room to the class · the `ls -l` exit ticket
7:40	**Close**	Lab submission check · homework through Sunday · Week 4 phase-gate preview

4	50:00	0	1
LOCKED ROOMS	ON THE CLOCK	MOUSE CLICKS	HINT TOKEN

TRAIN BEFORE TONIGHT — THE SEVEN ESCAPE SKILLS

If you can do these seven things, you can escape. Each one comes straight from a lab you've already done. Rusty on any? Re-run that lab this afternoon — that's the whole read-ahead assignment.

#	CAN YOU…	PRACTICE COMMANDS	FROM LAB
1	Move around and look inside things without a mouse	`pwd · ls · cd · cd .. · cat`	01:01–02
2	Build, copy, rename, and carefully destroy	`mkdir · cp · mv · rm -r`	01:02
3	Page through a long file — and get back out	`less file  (space = next, q = quit)`	01:03
4	Watch a file update live in a second terminal	`tail -f file  (Ctrl+C to stop)`	01:03
5	Edit, save, and exit in nano — no panic	`nano file · Ctrl+O, Enter · Ctrl+X`	01:03
6	Use sudo when the system says you can't	`sudo whoami · sudo chown`	01:04, 01:06
7	Read an `ls -l` permission string and change it	`ls -l · chmod · chmod +x`	01:06

Skill 7 is the boss fight. Practice reading `-rwxr-x---` out loud: owner can read/write/run · group can read/run · everyone else — nothing. If you can say that sentence for any listing, the vault will not stop you. This is also the exact skill next week's **Module 01 phase-gate** tests.

RULES OF THE BUILDING

FAIR PLAY

- Don't enter `~/escape-night` before the race starts
- Coach teammates with **words only** — never type on someone else's machine, never screen-share an answer
- No web searches needed or allowed — **everything is in the rooms** and on this page
- Notes, this handout, and your lab files: all legal

SAFETY

- Everything happens inside `~/escape-night/` — the game never asks you to touch anything outside it
- The game contains exactly one `rm -r`. Same ritual as lab: **read the path twice, then read it again**
- Wrecked your room? `bash setup.sh --reset` rebuilds it fresh in seconds — you only lose time, never your computer

WHAT "ESCAPED" LOOKS LIKE

The final door prints a victory banner in your terminal. **Screenshot it and post it in Zoom chat** — that's tonight's participation artifact, and it's how your pod proves its clears. Then be ready to read one `ls -l` line out loud in the debrief. That's the exit ticket.

Still owe labs? Tonight IS the review. Everything you type in the escape room is labs 01:02–06 material — finish and submit those in D2L by **Sunday**. Labs, not attendance, gate your progress to Week 4.
