WEEK PREVIEW · LEARNING OBJECTIVES

WEEK 4 · TERMINAL ADVANCED

MODULE 01 · NET, PROCESSES, PIPES & USERS

Prove the network, read the machine's pulse, chain commands, rehearse the docker group — then the timed phase-gate.

MON AUG 10 + WED AUG 12 · 6:00–8:00 PM · ZOOM · LABS 01:07–11

This week closes Module 01. Monday we cover networking, processes/services, pipes & grep, and users/groups (01:07–10) — including an intentional `usermod` failure that previews Docker. Wednesday is the clinic plus the timed, no-help **Module 01 phase-gate** (01:11). Labs — not attendance — gate progress.

TONIGHT'S LEARNING OBJECTIVES

01:07
NETWORKING

Diagnose reachability with `ip a`, `ping`, `curl`, `ss`, and `dig` — including Docker Hub.

01:08
PROCESSES

Inspect the machine with `ps`, `top` / `htop`, `systemctl`, `journalctl`, `free`, `df`.

01:09
PIPES & GREP

Chain commands with `|` and search with `grep` (`-v` / `-i` / `-r`), plus `cut` / `sort` / `uniq`.

01:10
USERS & GROUPS

Read `id` / `groups`; rehearse `usermod -aG` (docker group fails on purpose today).

BEFORE MONDAY

- Labs **01:02–06** submitted in D2L (Escape Night review counts)
- Confirm remote still connects — green **WSL** or **SSH** badge
- Watch Module 01 videos for 07–10 if posted in D2L
- Bring laptop + charger + your sudo/Linux password
- Expect Wednesday's gate to be **timed + no help**

KNOW BEFORE YOU TYPE

- `ping` / `top` aren't frozen — **Ctrl+C** or **q** to stop
- WSL may lack `ssh.service` — `cron` active is the substitute
- `usermod -aG docker` **will fail** tonight — capture the error
- Phase-gate = from memory, no copy-paste, no neighbor help

MONDAY · INSTRUCTION

CLOCK	BLOCK	WHAT WE DO LIVE	LAB IDS
6:00	Open + recap	Sign-in · 01:02–06 status · warm-up: read one `ls -l` permission string out loud	—
6:15	Networking	`ip a` · `ping` · `curl` · `ss -tuln` · `dig` — prove the box can reach Docker Hub	01:07
6:40	Processes & services	`ps aux` · `top` / `htop` · `systemctl` · `journalctl` · `uptime` / `free -h` / `df -h`	01:08
7:05	Pipes & grep	Build pipelines live · `grep -i` / `-v` / `-r` · `wc` · `cut` · `sort` · `uniq`	01:09
7:30	Users & groups	`id` / `groups` · intentional `usermod -aG docker` failure · `newgrp` idea · Wed gate preview	01:10

WEDNESDAY · LAB CLINIC + PHASE-GATE

CLOCK	BLOCK	WHAT WE DO LIVE	LAB IDS
6:00	Clinic triage	Networking fails · `top` / `less` exits · pipe typos · WSL `systemctl` quirks	01:07–10
6:40	Module 01 gate	Timed, no-help run of **01:11** — 33 drills from memory + 5 verification commands	01:11
7:30	Redo triage	Stuck on a drill? Re-open that lesson — the gate points you back to the source	01:11
7:50	Close	Confirm gate screenshot in D2L · Module 02 / Docker preview for Week 5	—

Core path this week: labs **01:07 → 08 → 09 → 10 → 11**. Warm row = redo after the gate. The phase-gate is the unlock for **Module 02 Docker** — treat Monday's four labs as the dress rehearsal.

2	4	01:11	M02
LIVE BLOCKS	MON LABS	PHASE-GATE	UNLOCKS DOCKER

LEARNING OBJECTIVES — WHAT "DONE" LOOKS LIKE

Each row is one D2L learning object. Do the video (if available), then the lab, then submit the screenshot. Do them **in order** — the phase-gate assumes all four skills are warm.

CORE **MODULE 01 · TERMINAL ADVANCED**

Mon instruction · Wed gate

#	LAB	LEARNING OBJECTIVE	PASS / SCREENSHOT
01:07	Networking Drills	MON Diagnose network readiness for Docker Hub using `ip a`, `ping`, `curl`, `ss -tuln`, and `dig`.	Checkpoint commands show reachability + DNS + HTTP working
01:08	Processes & Services	MON Inspect processes and service health with `ps aux`, `top` / `htop`, `systemctl`, `journalctl`, `uptime`, `free -h`, `df -h`.	`systemctl is-active` passes for ssh **or** cron (WSL tolerance)
01:09	Pipes and Grep	MON Chain commands with pipes and search with `grep` (`-v`, `-i`, `-r`), plus `wc -l`, `cut`, `sort`, and `uniq`.	Five checkpoint pipe/grep commands run clean in one terminal
01:10	User & Group Setup	MON Read users/groups with `id` and `groups`; rehearse `sudo usermod -aG` and understand `newgrp`.	Capture the expected **docker group missing** error — don't "fix" it
01:11	Final Checkpoint	WED **Module 01 phase-gate.** Run the cumulative drills from memory (no copy-paste, no help), then the five verification commands.	One screenshot/transcript of all five verifications · unlocks Module 02

STUCK-SPOT CHEAT SHEET

MOMENT	WHAT FAILS	FIX LINE
ping / top	"Terminal won't give me my prompt back"	**Ctrl+C** stops ping · **q** quits top/htop — not frozen
curl / dig	DNS or Hub unreachable	Check Wi-Fi/VPN first · then `ping 8.8.8.8` vs `ping google.com` (IP vs DNS)
systemctl	ssh.service missing on WSL	Expected on many WSL setups — `systemctl is-active cron` counting as pass
pipes	Empty output / weird errors	Build left→right one stage at a time; confirm each piece alone before adding `|`
usermod	`group 'docker' does not exist`	**That's the lesson.** Docker creates the group in Module 02 — screenshot the error
phase-gate	Blank on a command	No help during the timed run — reopen the matching lesson after, then re-attempt

After Wednesday → Sunday: labs **01:07–11** submitted in D2L (gate included). Minimum comfort: you can prove network + process health, build a pipe with `grep`, and explain why the docker `usermod` failed. **Next week:** Module 02 — install Docker Engine and run your first containers.
