LIVE LAB CLINIC

WEEK 1 · WEDNESDAY

MODULE 00 — VS CODE HANDS-ON

Keyboard drills together. Bring stuck screenshots. We leave with a working IDE environment.

WED · 6:00–8:00 PM · ZOOM · LABS 00:00–04 (+ WSL STRETCH)

Wednesday is a lab clinic — not a new lecture. We work Module 00 side-by-side: install VS Code, open the terminal, add course extensions, and (Windows) get WSL connected. Save screenshots locally until the D2L Dropbox is live. Labs — not attendance — gate progress.

SESSION GOALS

1
VS CODE OPEN
Welcome tab up. Skip sign-in. You can name the five UI regions.

2
TERMINAL WORKS
`echo hello` prints in the panel — not in a file.

3
EXTENSIONS IN
Python + Docker (+ WSL / Remote SSH for remotes).

4
WSL GREEN
Windows: bottom-left shows **WSL: Ubuntu**. Mac/Linux: native `uname -a`.

BEFORE WEDNESDAY

- Finish / attempt labs **00:00–02** (install, UI tour, terminal)
- Stretch: labs **03–04** (Python + Docker extensions)
- Windows: run `wsl --install` at home and **reboot** before class
- Bring laptop + charger + admin password
- If D2L is still locked, email us — don't wait

BRING TO CLASS

- Any stuck screenshot or error message
- Whether you're on Windows, Mac, or Ubuntu
- Questions from Module 00 videos
- Patience — Docker sidebar empty/error is expected
- Laptop charger (session runs ~2 hours)

2-HOUR AGENDA

CLOCK	BLOCK	WHAT WE DO LIVE	LAB IDS
6:00	**Open + check**	Attendance sign-in · OS check · VS Code open / install catch-up	00:00
6:15	**UI tour**	Five regions · Command Palette · font size 16 · folder open	00:01
6:35	**Terminal**	Open panel · `echo hello` · typing drill · screenshot	00:02
7:00	**Extensions**	Python (Microsoft) · Docker whale · WSL + Remote SSH	00:03–04
7:25	**WSL clinic**	Windows connect · green badge · `uname -a` · Mac/Linux buddy help	00:05
7:50	**Close**	What "done" looks like · homework through Sunday · preview Week 2	—

Warm rows = stretch. Core path is labs **00:00–04**. WSL (00:05) is the big Windows win if you pre-installed. SSH (00:06) + Module 00 checkpoint (00:07) → **Week 2 Monday** unless the shared host is ready early.

~2 hr	5	00	WSL
LIVE CLINIC	CORE + STRETCH LABS	MODULE FOCUS	WINDOWS PRIORITY

LAB LAYOUT — WHAT "DONE" LOOKS LIKE

Each row is one D2L learning object. Do the video (if available), then the lab, then save/submit the screenshot. Highlighted rows are stretch goals for Wednesday.

CORE **MODULE 00 · VS CODE WALKTHROUGH** — Wed focus · ~90–110 min live

#	LAB	WHAT YOU DO	PASS / SCREENSHOT
00:00	What is an IDE?	Install VS Code from code.visualstudio.com. Land on Welcome. Skip sign-in / sync.	Full-window screenshot + one sentence: what an IDE is
00:01	VS Code UI Tour	Open a folder. Name five regions. Command Palette. Settings → font size **16**.	Folder open + Settings showing font size 16; list the five regions in comment
00:02	Integrated Terminal	Open terminal panel (`Ctrl/`` or View → Terminal). Run `echo hello` twice.	Terminal panel visible with both echo commands + output
00:03	Extensions Overview	Install **Python** by **Microsoft** only. Confirm under Installed.	Extensions side bar with Python + Microsoft publisher visible
00:04	Docker Extension	Install Docker (Microsoft). Open whale sidebar. Empty / "Failed to connect" is correct.	Whale icon + open sidebar (error OK) + one sentence why it's empty
00:05	WSL Connection	**Windows:** WSL extension → connect → green badge. **Mac/Linux:** native terminal `uname -a`.	Windows: **WSL: Ubuntu** + `uname -a`. Mac/Linux: `uname -a` output
00:06	SSH Remote	Week 2 (or stretch if host ready): Remote-SSH → connect → `hostname` + `whoami`.	Green **SSH: hostname** + both command outputs

STUCK-SPOT CHEAT SHEET

MOMENT	WHAT FAILS	FIX LINE
Install	No admin / locked laptop	Put name in chat — alternate path (SSH lab machine) later
Sign-in	Sync settings prompt	Skip — optional cloud sync. You never need to sign in for Phase 1
Palette	Mac hitting Ctrl	Mac = **Cmd** tonight (`Cmd+Shift+P`)
Terminal	Typing in editor / no backtick	Click the bottom panel; or View → Terminal
Docker	"Failed to connect"	Correct — Docker Engine is Module 02. Extension only tonight
WSL	Needs reboot / password blank	Reboot after install; password typing is invisible — keep typing
Excited	10 random extensions	Only Python + Docker (+ WSL / Remote SSH). Continue.dev comes later

After Wednesday → Sunday: Finish any remaining Module 00 labs you started. Don't stress Docker Engine or full terminal Module 01 yet — those land in later weeks. Minimum comfort: VS Code opens, terminal echoes, extensions installed, Windows on WSL green.
