WEEK 3 · WEDNESDAY LIVE BLOCK

TERMINAL ESCAPE NIGHT

"LOCKDOWN AT CHIEFOS" · MODULE 01 CULMINATING EVENT

Four locked rooms. One dead GUI. Everything you learned this week is the key.

WED AUG 5 · 6:00–8:00 PM · ZOOM · 3 TEAMS · 4 ROOMS

Tonight replaces the lab clinic with a race. A bad update has locked every door in the ChiefOS server building — mouse dead, GUI dead, terminal only. Three teams, each in its own Zoom breakout room, fight through four escape rooms. Every room is secretly a Week 3 lab in disguise: navigation, `cp` / `mv` / `rm -r`, `less` / `tail -f` /nano, and the boss fight — **permissions**. Escape the building and you've re-run labs 01:02–06 without noticing.

THE THREE TEAMS

BREAKOUT 1

TEAM SUDO

"We have the power." Debrief assignment: teach the class the vault — `chmod` + `chown`.

BREAKOUT 2

TEAM NANO

"We know the exit keys." Debrief assignment: teach the comms room — `less`, `tail -f`, nano.

BREAKOUT 3

TEAM CHMOD

"We decide who reads." Debrief assignment: teach maintenance — `cp` / `mv` / `rm -r`.

HOW THE RACE WORKS

- Everyone types on their **own machine** — no passengers
- A room counts as cleared only when **every member** has its code word
- Roles rotate each room: **Driver** (shares screen, types), **Reader** (reads files aloud), **Scribe** (tracks code words, posts clears)
- Scribe posts clears in main chat: `SUDO cleared Room 2 — NOUNDO`
- Teammates who escape early coach the rest — **words only**, no typing on anyone else's machine

WINNING & HINTS

- **Winner:** first team with every member through the final door — banner screenshots in chat prove it
- Each team gets **3 hint tokens** — spend one to summon the instructor for a nudge
- Tiebreaker: fewest hint tokens spent
- First hint is always free advice: **read the room's files again** — the answer is written down. It always is.

TONIGHT · RUN OF SHOW

CLOCK	BLOCK	WHAT WE DO LIVE
6:00	**Open + triage**	Sign-in · quick D2L check on labs 01:02–05 · unstick anyone blocked — the game finishes the review job
6:20	**Story launch**	The premise · team assignments · rules · everyone runs `bash setup.sh` · teams split to breakout rooms
6:30	**The escape**	50:00 on the clock · three rooms racing · leaderboard live in main room · instructor floats + broadcasts milestones
7:20	**Debrief**	Each team teaches its assigned room · exit ticket: read `ls -l ~/escape-night/escape` out loud — the phase-gate question
7:40	**Close**	Confirm 01:02–06 submitted in D2L · homework through Sunday · Week 4 phase-gate warning (timed, no-help)

Participation artifact: your escape banner screenshot, posted in Zoom chat. **Still owe labs?** Everything you do tonight IS the lab material — finish 01:02–06 in D2L by Sunday. The vault room is `chmod` / `chown` practice on purpose: it's what next week's **Module 01 phase-gate** leans on hardest.

3	4	50:00	rwx
TEAMS RACING	LOCKED ROOMS	ON THE CLOCK	FINAL DOOR

INSTRUCTOR PAGE — do not screen-share. Page 1 is safe to show or send to students. This page has the full answer key.

ANSWER KEY — ROOMS, SKILLS, CODE WORDS

ROOM	SKILL (LAB)	SOLUTION	CODE WORD
1 · Lobby	`cd` / `ls` / `cat` (01:02)	Navigate decoys; passcode is in `server-closet/rack-3/passcode.txt`	NOMOUSE
2 · Maintenance	`mkdir` / `cp` / `mv` / `rm -r` (01:02)	`mkdir slot` · `cp supplies/keycard-blue.txt slot/` · `mv` to `keycard.txt` · `rm -r decoy-wires` · `bash unlock.sh`	NOUNDO
3 · Comms	`less` / `tail -f` /nano (01:03)	First half **PRESS** at bottom of `manual.txt` via `less` · `bash antenna.sh` then `tail -f signal.log` in a 2nd terminal → **Q** · nano `reply.txt` · `bash transmit.sh`	PRESSQ
4 · Vault	`ls -l` / `chmod` / `chown` /sudo (01:04, 01:06)	`chmod 600 vault-a.txt` → ROOT · `sudo chown $USER vault-b.txt` + `chmod 600` → ACCESS (no-sudo fallback: plain chmod)	ROOTACCESS
Final door	nano + `chmod +x` (01:03, 01:06)	nano `escape-plan.txt` : 4 words, one per line, ALL CAPS · `chmod +x escape` · `./escape`	banner

PREDICTED STUCK SPOTS

SYMPTOM	WHAT'S HAPPENING	FIX LINE
Room 2	Slot "spits the card out" / blue card gone	Wrong card (log says which survived) — or they `mv`'d instead of `cp`; unlock.sh tells them how to fix it
less	"The manual froze my terminal"	It's a pager — press **q**. This is the lesson.
tail -f	"The radio shows nothing"	Radio dies after ~45s — rerun `bash antenna.sh`, keep the `tail -f` terminal open
nano	Stuck inside, can't save or leave	**Ctrl+O**, Enter, **Ctrl+X** — arrows won't escape
chown	"Operation not permitted" on vault-b	Forgot `sudo`. Let them see the error first — the room's door.txt explains it
./escape	"Permission denied"	Mode 644 on purpose — `ls -l escape`, find the missing **x**, `chmod +x escape`
Anything	Unrecoverable mess mid-game	`bash setup.sh --reset` rebuilds a fresh room in seconds

BEFORE CLASS CHECKLIST

SETUP

- Post `setup.sh` where students can grab it: D2L file, Zoom file transfer, or course site (`curl -O` = lab 01:07 stretch tie-in)
- Students run it **as themselves** — never with sudo; it prompts for sudo once at the end to seal the vault
- sudo fails for someone? Game still works (chmod-000 fallback) — don't burn time on it
- Dry-run it yourself: `bash setup.sh --reset`

ZOOM

- Pre-create 3 breakout rooms named **SUDO** / **NANO** / **CHMOD**
- Balance teams: each gets at least one lab-01:02-05 cruiser and one struggler
- Use **broadcast to all rooms** for milestones — "NANO has entered the vault…" keeps the race live
- Leaderboard doc or whiteboard shared in the main room

FILES · THIS EVENT

Game builder: `class-materials/terminal-escape-room/setup.sh` · Full instructor notes: `class-materials/terminal-escape-room/RUN-OF-SHOW.md`
Only `rm -r` in the game targets `~/escape-night/…/decoy-wires` — same "read the path twice" ritual as lab 01:02. Nothing writes outside `~/escape-night/`.
