INSTRUCTOR RUN-OF-SHOW · MODULE 00 · WEEK 1

MONDAY KICKOFF

2-hour live session — welcome, survey themes, D2L, then Module 00 lessons 00–02 (setup stretch: extensions).

MONDAY, JULY 20 · 6:00–8:00 PM · ZOOM

SESSION OUTCOME

Every student leaves with **D2L access confirmed**, **VS Code installed and open**, the **integrated terminal working**, and (if time) **Python + Docker extensions** installed. Windows students leave knowing **WSL is homework** — reboot at home, not in class.

2-HOUR AGENDA

CLOCK	BLOCK	WHAT YOU DO
6:00–6:25	**A · Open the room**	Welcome · survey themes · how the course works · D2L tour · chat poll (Windows/Mac)
6:25–6:55	**B · Lessons 00–01**	Editor vs terminal vs IDE · install VS Code · UI tour (activity bar, sidebar, command palette)
6:55–7:00	**Break**	Stretch; help anyone still installing
7:00–7:30	**C · Lesson 02**	Integrated terminal · `echo hello` · editor pane vs terminal pane
7:30–7:50	**D · Setup stretch**	Extensions: Python + Docker (lessons 03–04) · "Docker empty = correct"
7:50–8:00	**E · Close**	Homework · Wednesday clinic · Phase 1 note · Q&A

BEFORE YOU HIT START

- Zoom waiting room + link ready
- Survey spreadsheet open (themes only)
- D2L course open for screen share
- code.visualstudio.com ready (Win + Mac)
- Your VS Code already open as "done" reference
- Chat prompt ready: Windows or Mac?

STUDENTS SHOULD HAVE

- Laptop + charger
- Login password (installs will ask)
- D2L login
- Survey done if possible
- **Not required tonight:** WSL, GitHub, Docker Engine

Chromebook / tablet → chat now; we'll find an option.

Scope for tonight: Kickoff + Module 00 lessons **00–02** (required). Lessons **03–04** if time. **Do not** install WSL in class (reboot). WSL + SSH are **Week 2 Monday**. Final checkpoint is not tonight.

BLOCK A · OPEN THE ROOM (6:00–6:25)

A1 · WELCOME & SETTLE · ~2 MIN — 6:00

SAY *Welcome in — I'm Tim Carrender. This is Agentic Coding, Temple College Workforce Development with ChiefOS. Mute if you're not talking; put questions in chat or unmute. Drop in chat: Windows or Mac, and whether you're already in D2L.*

DO
Start recording. Pin chat. Note Windows vs Mac counts.

WATCH FOR
Anyone with Chromebook / work-locked laptop — flag for follow-up.

A2 · SURVEY THEMES · ~3 MIN — 6:02

SAY *Before class you took a short baseline — confidence, skill, and knowledge across coding, terminal, Git, Docker, debugging, reading code, and AI tools, plus whether you've built an app and what you want from the course. That's not a test. It tells me where to spend clinic time.*

SAY *Most of this cohort is beginner to intermediate. Phase 1 starts with foundations on purpose. If you've already shipped apps, early weeks may feel like review — stay if you want the structure and the AI path; move fast through labs you know. If you're newer, you're in the right room.*

SCALES 1-9 (1-5 EACH)

- Coding confidence
- Terminal skill
- Git knowledge
- Debugging confidence
- Docker skill
- Reading code
- AI coding confidence
- AI prompt skill
- Learning new tools

Q10-11 · EXPERIENCE & GOAL

- Built an app? shipped / small / not yet / not sure
- Open: what they want from the course

Do not screen-share individual scores. Speak in cohort themes only.

A3 · HOW THE COURSE WORKS · ~5 MIN — 6:05

SAY *Four things to remember. One: self-paced — you advance by finishing labs, not by sitting on Zoom. Two: every lesson has a short video, then a lab you submit in D2L. Three: live blocks are support — Monday instruction, Wednesday lab clinic, 6 to 8. Miss one? Recordings go in D2L. Four: three phases — Foundations, building real apps, then AI-assisted development on the college AI server. No ChatGPT subscription required. After Phase 1 there's a break before Phase 2 — I'll email the start date.*

SHOW
Optional: syllabus one-pager or D2L module list.

EMPHASIZE
Labs unlock next lessons. Attendance is not the gate.

A4 · D2L TOUR + TONIGHT'S JOB · ~10 MIN — 6:10

SAY *I'm screen-sharing D2L. This is where every video, lesson, and lab lives. Submitting a lab unlocks the next object. If you can't see Agentic Coding right now, put your name in chat — don't wait until Wednesday.*

SHOW
Course home → Module 00 · video → lesson → lab · recordings

DONE WHEN
Logins confirmed in chat; blocked accounts noted

Bridge to Block B: Tonight = intro + setup. Leave with VS Code open + terminal working. Windows: WSL is homework (reboot at home).

BLOCK B · LESSONS 00-01 (6:25-6:55)

00 · WHAT IS AN IDE? · INSTALL VS CODE — ~15 min

> **SAY** *Before we touch any code, three words: editor, terminal, IDE. By the end of this block VS Code is installed and open on your laptop.*

- **Editor** — type and save text (Notepad / TextEdit)
- **Terminal** — type commands, computer runs them (Command Prompt / Terminal app)
- **IDE** — editor + terminal + tools in one window. **VS Code is an IDE.**

> **SAY** *VS Code is free and won't force you to sign in. If it offers "Sign in to sync settings," skip it. Our AI comes later in Module 05 via Continue.dev — nothing to buy tonight.*

SHOW	DO
Notepad → Terminal → your open VS Code, same task in all three.	Start downloads early (~100 MB). Talk while it installs.

- Browser → **code.visualstudio.com** → Download for your OS
- Run installer · accept defaults · open VS Code
- Mac: replace every **Ctrl** with **Cmd** for the rest of the night

Done when: VS Code welcome screen is open. Hands up if install fails — do not move on without them.

01 · VS CODE UI TOUR — ~15 min

> **SAY** *Activity bar is the thin icon strip on the left edge. Sidebar is the panel that opens when you click an icon. Don't mix the names.*

- Activity bar · Explorer · editor tabs · status bar
- **Command palette** — Ctrl+Shift+P (Cmd+Shift+P on Mac). Drill it. If they remember one shortcut, this is it.
- Settings: gear or palette → "settings"

> **Stuck spot:** Student's UI looks different (theme/panels). Note it; don't rebuild their layout in class.

Done when: Student can open command palette on demand and point to activity bar vs sidebar.

6:55 · BREAK · 5 MIN

Help remaining installs. Remind Windows students: **no WSL reboot tonight**.

BLOCK C · LESSON 02 (7:00-7:30)

02 · INTEGRATED TERMINAL — ~25-30 min

> **SAY** *A terminal is where you type a command, press Enter, and get text back. VS Code's integrated terminal is the same thing — embedded so you never alt-tab away.*

- Open with **Ctrl+`** (backtick under Escape), or **View → Terminal**, or command palette
- Click inside the terminal panel (not the editor)
- Type `echo hello` → Enter → should print `hello`
- Again with their name · close · reopen · output still there

Stuck / done: No backtick → View → Terminal. Typing in editor → point at panes. **Don't** teach `cd`/`ls` (Module 01). Done when `echo hello` prints in the terminal (D2L screenshot if required).

BLOCK D · SETUP STRETCH · 03–04 (7:30–7:50)

03–04 · EXTENSIONS · PYTHON + DOCKER — ~20 min

> **SAY** *Only install what I tell you. Marketplace is a candy store — don't install ten things. Skip Continue.dev (Module 05).*

- Extensions → install **Python** (`ms-python`) + **Docker** (`ms-azuretools`)
- Docker sidebar failed/empty = **correct** (Engine is Module 02)
- Marketplace blocked → note name; VSIX after class / Wednesday clinic

BLOCK E · CLOSE (7:50–8:00)

HOMEWORK · WEDNESDAY · PHASE NOTE — ~10 min

> **SAY** *Done for Monday when VS Code opens, terminal works, and extensions are in — or you have a clear next step. Wednesday = clinic; bring stuck labs and screenshots. Week 2 Monday = WSL + SSH + Module 00 checkpoint.*

BEFORE WEDNESDAY

- Finish VS Code / terminal / extensions
- Submit labs 00–02 (03–04 if done)
- Windows: `wsl --install` + reboot
- Optional: GitHub account (week 10)

WEDNESDAY CLINIC

- Labs 00:00–04 stuck points
- Marketplace / firewall
- WSL install fallout
- Catch-up installs

CHEAT SHEET · STUCK SPOTS

MOMENT	FAILURE	FIX LINE
Install	No admin / locked laptop	Chat now; alternate path later
Sign-in	Sync settings prompt	"Skip — optional cloud sync"
Palette	Mac hitting Ctrl	"Mac = Cmd tonight"
Terminal	Typing in editor / no backtick	Point at panes; View → Terminal
Docker	"Failed to connect"	"Correct — Engine is Module 02"
Excited	10 random extensions	Only Python + Docker tonight

ZOOM · TEMPLEJC-EDU.ZOOM.US/J/85627136277

Meeting ID **856 2713 6277** · Survey **tktechventure.com/agentic-coding** · Contact **contact@tktechventure.com**

Tonight: **00 · 01 · 02** (+ **03 · 04** stretch). Deferred: **05 WSL · 06 SSH · 07 checkpoint** → Week 2.
